

NetKraft™ gives you

# COMPLETE CONTROL

over your ESP set-up

# Welcome to your new control room

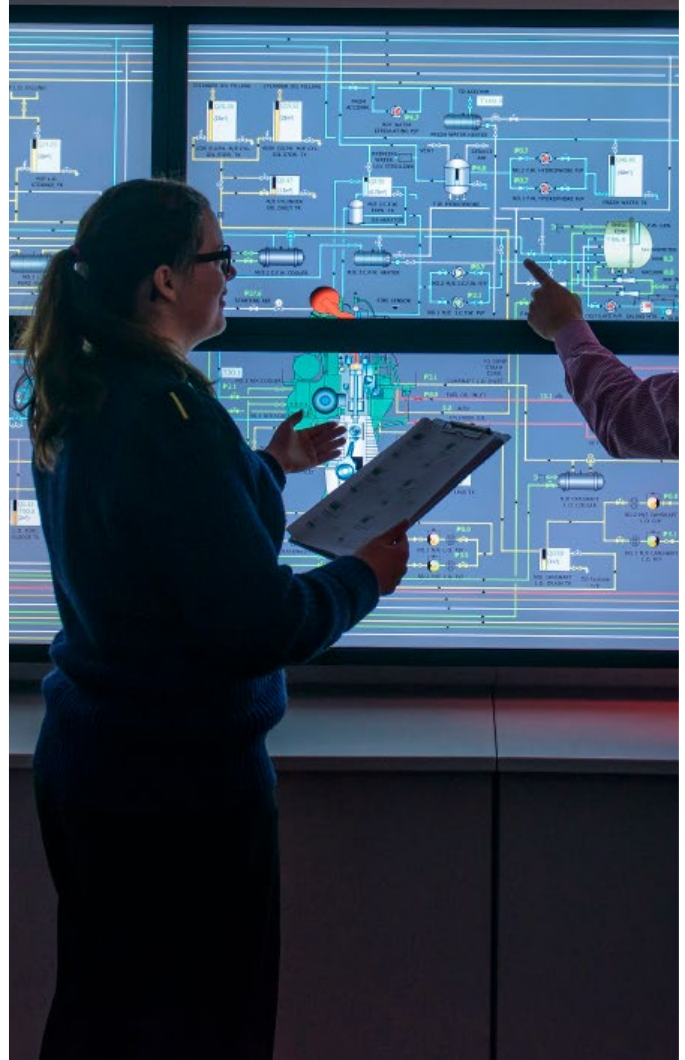

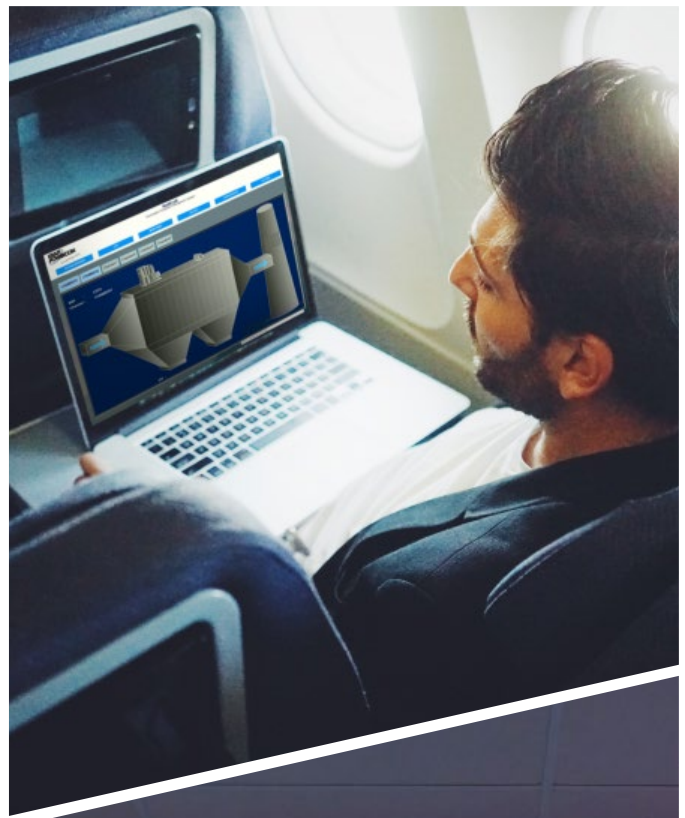

NetKraft is a user-friendly ESP management system that can be accessed locally from the plant or remotely from anywhere in the world.

NetKraft simply enhances the quality, efficiency and profitability of your operations, while cutting investment and operational costs.

And, you decide if you run it via a NetKraft-dedicated network or via Internet. This means that you can choose to sit in the control room or log on remotely. You can even have messages and alerts sent to your mailbox or smartphone.

**NetKraft gives you many benefits, here are irresistible ones:**

- Complete control
- Better business

# Optimizing your ESPs just got a lot easier

We're well-known for supplying premium power supplies and controllers for electrostatic precipitators (ESP). With NetKraft, we extend our offer with a user-friendly ESP management system (EPMS) that can optimize your ESP operations.

Your set-up might include several ESPs, power supplies and controllers from different sources. There are certainly auxiliary inputs and outputs like rapper, heater, hopper, insulation damper, boiler load, index, opacity and gas temperature/flow.

Managing the above is crucial to ensure optimal performance and reliability. Does it sound complex? NetKraft makes it easy.

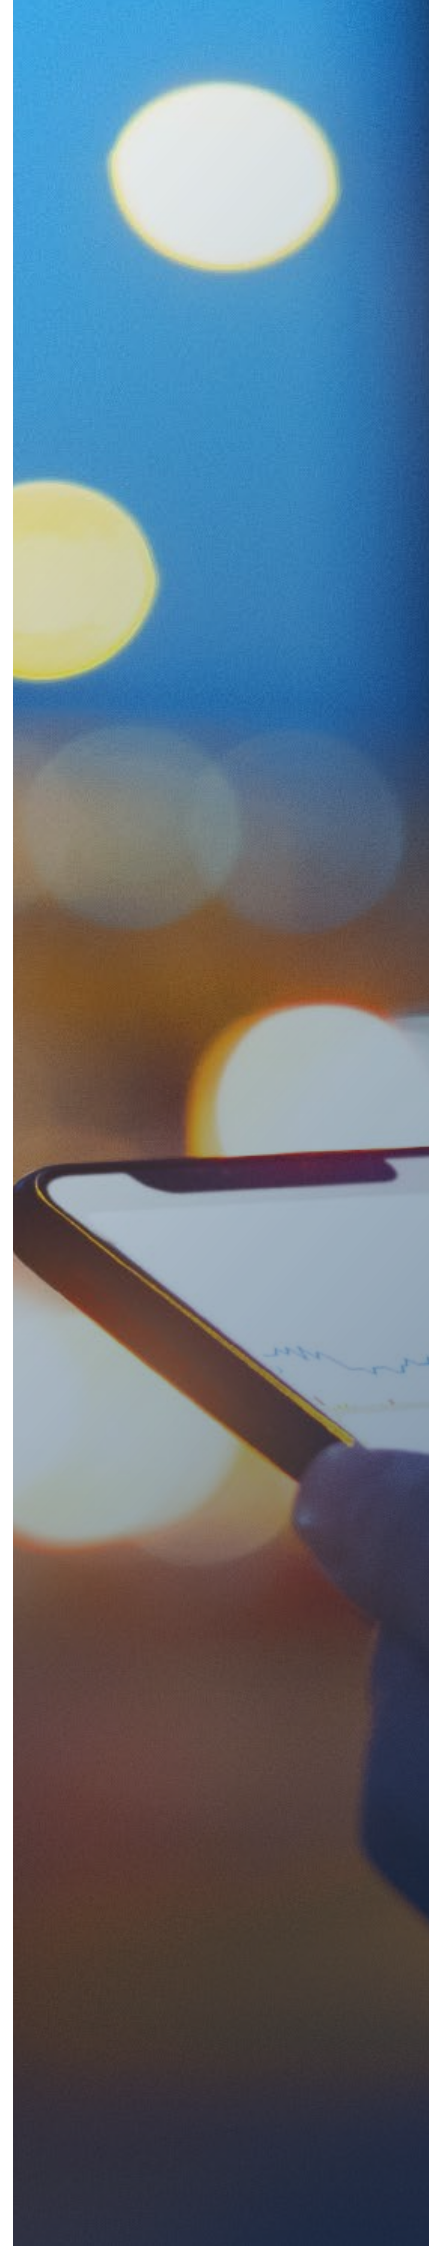

NetKraft is an EPMS that monitors, controls and supervises as many as eight ESPs, each with up to six chambers and ten fields. It reads/writes setting parameters, connects with DCS and can be run locally or via internet.

In short, to get the most out of your ESPs—NetKraft is the cost-efficient and user-friendly solution you need.

---

## Main features

- Works with all types of power supply controllers and I/Os.
- Web/LAN Server/Client types
- Energy management system
- Monitoring features (e.g. data logger, trending, VI Curve, alarm handling, reporting)
- Customized I/O programming

# Forget complexity. Hello convenience.

NetKraft controls and optimizes your set-up and offers a very convenient way to oversee and improve your operations.

# 6 areas where **NetKraft** will **improve** your business

## **1** Costs and profitability

NetKraft cuts investment costs and requires fewer resources. The running costs are lower too since you can reduce power consumption and predict and minimize failures or shutdowns by data analyzing.

## **2** Efficiency and reliability

With NetKraft you can adjust your operations to reach the desired efficiency. The reliability is excellent too, thanks to monitoring features.

## **3** Performance

NetKraft makes it easy to initiate all the parts of the ESP in order to optimize the performance of your ESP. In addition, it's designed to help predict and prevent failures, which minimizes downtime and maximizes revenues.

## **4** Maintenance and repairs

A major highlight is the log function. It helps service crews make the right decision if there is a problem. This speeds up repairs and shortens shutdowns. In addition, NetKraft makes it easier to restore the setting parameters when a problem is solved.

## **5** User-friendliness

With its graphic user interface, smart features and browser access via LAN or the internet, NetKraft really is user-friendly. To amplify this, it can be customized to fit your needs perfectly—you can even opt for e-mail or phone alerts.

## **6** Customer support

NetKraft improves your efficiency, reliability and performance. And it makes on-site service quicker and easier. Still, we offer round-the-clock support to really help you maximize the value of your everyday business.
